SWORN DEPOSITION

Depondent : ISHIBASHI, Tanzan

Having first duly swern an oath as on at sached sheet and in accordance with one procedure followed in my country I hereby depose as follows.

Def. Doc. # 1762 Translated by Defense Language Branch INTERVATIONAL MILITARY TRIBUNAL FOR THE FAR EAST THE UNITED STATES OF AFERICA, et al -VS-ARAKI, Sadao, et al Affidavit Deponent: ISHIBASHI, Tanzan Having first duly sworn as per sheet attached hereto and in accordance with the procedure followed in my country, I hereby depose as follows: 1) I, ISHIBASHI, Tanzan was born in Tokyo in September, 1884, graduated in 1907 from "ASEDA University, majoring in philosophy in the department of literature, and immediately took a post-graduate course in chilosophy in the same university. 2) In 1908 I obtained a rosition on the editorial staff of THE TOKYO MAINICHI NEWSTATER PUBLISHING COMPANY. 3) In 1911 I seemed a rosition on the editorial staff of THE TOYO YEJZAI SHIPPO Publishing Company. This publishing company was established in 1895 for the purpose of supplying the educated classes of the Japanese people with correct knowledge of economics and up-to-date information on world topics. It has since devoted itself to the rublication of economic - 1 -PURL: http://www.legal-tools.org/doc/11c535/ periodicals such as THE TOYO KEIZAI SHIMPO (Oriental Economic Reports) (weekly), THE ORIENTAL ECONOMIST (monthly, later weekly), NIHON KEIZAI NENPO (Japan's Yearly Economic Reports) (quarterly), GAIKOKU BÖEKI GEPPO (Foreign Trade Monthly), etc., and also of books on economic subjects, as well as the compilation and publication of statistical books such as Meiji and Taisho Japan Almanac (1927), Foreign Trade of Japan, a statistical survey (1935), Neiji and Taisho Financial Almanac (1927) and Toyo Keizai Statistical year Book (from 1916 yearly). THE TOYO KEIZAI SHINPO (Oriental Economic Reports) was started in 1895 after the style of THE ECONOMIST published in London. It is the oldest economic periodical in Japan and has, ever since its foundation, been regarded as the best and must trustworthy of pariodicals in the industrial and economic world of Japan.

- 4) In 1914 I became the Chief of the editorial staff of the same publishing company, and in 1924 marager of the same company. In 1925, after the reorganization of the company I became its president. For 34 years I had been most closely connected with the editing of the aforsaid TOYO KEIZAI SHIMPO (Orientel Economic Reports). until "ay, 1946.
- 5) In July, 1931, I had the Keizai Club (Economic Club) organized in Tokyo and then in Osaka, Nagoya, and various other cities throughout the country, by getting together the leading

businessmen of each city for the purpose of their joint study of economic questions. As chairman of the board of directors of the central Economic Club. I took the leadership of these clubs.

- 6) From July, 1932 to March, 1947, I lectured on economics at the YOKOHAMA FOGYO SENMON GARKO (Yohohama Industrial College).
- 7) In June, 1943, I founded the KINYU CAKKAI (Financial Institute), as an organ for financiers and technical experts of the country to study financial questions. Its headquarters were in the office and building of the TOYO KEIZAI SHIMP PUBLISHING COMPAR and as acting director of the Institute, I devoted myself to the leadership and promotion of its activity.
- 8) In 1934, I started an English Magazine, THE CRIENTAL ECONOMIST of which I became editor-in-chief. This magazine portrayed the economic conditions of Japan as well as of the East in general. The magazine soon obtained many preciative readers abroad who considered it as the most fair-minded and trustworthy economic magazine published in Japan. Even after the outtrack of the Pacific War in 1941, and consequent stoppage of communications with the Western countries it was, by the request of the League of Nations, continuously forwarded to Geneva.
- 9) Since 1935, representing the financial circles of Japan, I have held 21 different memberships in various committees and councils in the cabinet. Finance Office, and Commerce and Industry Office of the Japanese government.
  - 10) In May, 1946, I was applinted Finance Minister in the Yoshida

cabinet. On January, 1947. I was appointed managing head of the Economic Stabilization Office and head of the Prices Board, and on March 20, 1947 resigned from the same offices. On the resignation on bloc of the Yoshida Cabinet on May 24th, 1947. I resigned from the office of Finance Minister.

- 11) The essays I have written and published in various magazines since graduating from the university on economic subjects and others are innumerable. The following are representative of my works published in book from:
  - a) ADVOCATING A NEW AGRICULTURAL POLICY. .... July 25. 1927
  - b) INFLUENCE OF THE LIFTING OF THE GOLD EMBARGO
    AND COUNTER-MEASURES THERETO. July 12, 1929

    C) A STUDY OF GOLD STANDARD. May 12, 1932

    d) THEORY AND FACTS ABOUT INFLATION. July 8, 1932
  - e), RECENT ECONOMIC AND FINANCIAL PHASES IN JAPAN. Sept. 5. 1939
  - f) FINANCIAL HISTORY OF JAPAN. Sept. 15, 1936
  - g) JAPANESE ECONOMY IN A REVOLUTION. Nov. 20, 1937
  - h) IMPRESSIONS OF INDUSTRIAL PHASES OF MANCHURIA
    AND KOREA. Feb. 26, 1941
  - i) HUMAN LIFE AND ECONOMY. Oct. 20, 1942
- 12) I collaborated with E.B. Schumpeter in the editing of the Industrialization of Japan and Manchukuo, 1930-1940 (pub. 1940), which was carried out by the financial support of the Bureau of International Research at Harvard University and incloliffe college.

## 1. OVER-POTULATION AND FOOD SHORTAGE IN JAPAN

It is not too much to say that all distinctive features of Jaranese economy and politics have emanated from the pressure of over-population. How Japan has been over-populated may be best shown by comparing the area of her arable land with her population.

As shown in Table 1 (attached), the density of population per 1 square kilometer in the Japanese mainland stards at 191, only slightly lower than 196 in the British mainland. However, the density of population per 1 square kilometer of arable land in the Japanese mainland is 1,194, far higher than 891 in the British mainland and eclipsing the corresponding density in any other country.

The over-population in Japan has become aggravated with the larse of time as shown in Table 2. During the period from 1882 to 1939, the Japanese population was nearly doubled from 37,000,000 to 73,000,000. During the same period, however, the area of arable land increased less than 35 per cent from 4,507,000 chobu to 6,079,000 chobu. Thus, the Japanese population is disproportionately large to the small area of her arable lard.

In this connection, it should be additionally pointed out that the proportion of agricultural population in the total population in Japaniis exceptionally large although it has

As shown in Table 3, the agricultural population at present still accounts for 47.2 per cert of the total population.

According to the national census the agricultural population also accounted for 43.1 per cent of the working population in the year of 1944 (Table 4). Those population figures are compared with those in other Pacific countries in Table 5. According to Table 5, the percentage of the agricultural population in the working population in Japan comes next only to British Malay and is twice as high as in the United States.

Under these circumstances, the agricultural management, unit in Japan becomes inevitably small. As shown in Table 6, 94 per cent of Japanese farmers in 1946 were cultivators of less than 2 chobu (less than 2 hectares) of arable land each. Japan is not self; supplied in food-stuffs domestically. Table 7 shows how the supply-demand situation of rice, the staple food for the Japanese, stands. It shows that Japan proper in the past was able to meet the national demand for rice by importing from 9,000,000 koku to 15,000,000 koku from abroad.

2. STEPS TAKEN BY JAPAN FOR COPING "ITH THE AFORE-MENTIONED DIFFICULTIES.

In order to cope with the afore-mentioned difficulties, Japan, as a whole, adopted four major policies.

In the first place, Japan attempted to bolster the food supply by either expanding the area of arable land within the country and or by increasing the per-unit harvest. Apparently Japan succeeded in attaining a certain success in these two attempts.

As Table 2 shows, the area of aritle land rose from 4,507,000 chobs in 1882 to 6,098,000 chobs in 1921. From then, however, the increase has stepped. In connection with the increase of the per-unit crops, the Government placed special stress on the improvement of rice. As shown in Table 8, the per-tan rice harvest, which averaged 1.536 koku during the years 1901 to 1905 was boosted to the average of 2.007 koku during the years 1934 to 1938. In order to increase the per-tan production, however, fertilizer consumption naturally rose markedly as shown in Table 9. The increase of the per-tan production, too, came to a standstill since 1939. (Table 8).

In the second place, Japan encouraged agricultural development in Korea and Formosa, and the importation from those countries to Japan of their farm products particularly rice. Thus,

Japan came to be able to import from these two countries rice in quantity almost enough to make up for the domestic shortage as shown in table 10.

In the third place, emigration was encouraged. This policy, however, proved a failure. Since the first year of Meiji (1868) up to the present, the Japanese population increased by 36,000,000 while Japanese overseas residents roughly numbered 1,000,000 in 1938, as Table 11 shows.

In the fourth place, domestic industrialization and foreign trade were encouraged. As stated, Japan imported the best part of her food shortage from Korea and Formosa.

Naturally, Japan was called upon to make incidental payments of the such imports with industrial manufactures.

Japan, unable to be self-sufficient in foodstuffs, cannot be expected to be self-supplied in agricultural raw materials. Mineral resources, too, are poor and scanty in Japan. In order to remove the pressure of over-population and elevate the living standard of the people even in the least degree, Japan was necessarily called upon to encourage domestic industrialization and accelerate foreign trade. Such were the basic policies which Japan actually adopted since the early years of Meiji.

## (3) Industrialization of Japan.

- 10 -

Oradual development of the industrialization in Japan experienced since the Maiji era can also be seen from the structure of the working people. (Table 4) The 12th Table attached hereto shows, too the above fact from the viewpoint of the number of workers of various industries shifted shines 1300.

industries attained in 1919 one million five hundred twenty thousand showing a 90% ingresse as compared with eight hundred thousand is 1909.

During this period. Japen saw this much of a speedy industrialization.

But the number of plant-workers in 1931 amounted to one million six hundred and sixty thousand. showing an increase of only a little less than 10% as compared to that of 1919. This period just corresponded to that of the depression period which appeared after the first world war and accordingly Japanese industries too were brought to a complete standstill. But this period of depression ended in Japan in 1931, and as a result of a reflation policy adopted since 1932, a period of boom came to the Industries, with the total number of workers in 1938 amounting to three million two hundred fifteen thousand showing twice as much an increase as compared to that in 1919 and 1931.

The abovementioned increase in number of industrial workers explains in the main with what tempo the industrialization of Japan was carried out, and explanation of this can be summarized as follows: The scope of industry during the period of ten years from 1909 to 1919 was doubled and it was the same in the period of seven years from 1931 to 1938, but

industry was almost at a stendstill from 1919 to 1931 so that the total number of workers in 1938 barely showed an increase of only twice as much as compared with that of 1919 during the period of nineteen years; in this increase there was nothing phenomenal if a comparison be made with the progress which was made during the period of 10 years from 1909 to 1919. The comparatively speedy progress experienced since 1931 means, as a matter of fact, nothing but a move of getting back what had been in arrears during the period of 10 years preceding 1931; it was, by no means, extraordinary progress.

Now let us see what kind of industry was brought to develop in Japan by such industrialization as mentioned above. First, the chief characteristic of industry in Japan was that of the textile industry which had always occupied a preponderant position. In referring to the number of workers given in the 12th Table, it is found that in 1938 textile workers numbered nine hundred seventy six thousand, occupying 30.4% of the total number of workers. If the eighty seven thousand five hundred and sixty workers in 1938 of the rayon manufacturing industry, which is included in the chemical industry, is added hereto the number of the textile workers would increase to 1,064,512 and its ratio to the total number of all the industrial workers to 33.1%.

This Ratio, which the textile industry occupied, had a trend to go down gradually from the historical viexpoint; viz, the proportion of textile workers to that of workers of all the industries is as follows:

60.8% in 1909.

55.2% in 1919.

54.1% in 1931 and

30.4% in 1938.

which clearly shows a gradual decline in general.

By what, then, was this decline of ratic in the textile industry supplemented? It was principally by the motal industry, machine and tool industry and chemical industry. For example, with the number of workers for each of these industries in 1909 taken into account, we see that the ratio of the metal industry was 2.3%, that of the mechine and tool industry 5.8% and that of the chemical industry 5.4%, but in 1919 this ratio increased respectively to 4.9%, 12,3% and 7.1%, which shows an increase, during this period, of 113%, 112% and 31% respectively for the metal, machine and tool, and chemical industries. From these figures it is clearly understood how great a development these three industries schieved during this period.

The development of the above three industries was retarded, however, in the period of depression covering 12 years from 1919 to 1931. Not only this, but in the machine and tool industry, the number of workers fell from 187,000 to 158,000 and in all industries, the ratio from 12.3% to 9.5%.

But this state of depression ended with the year of 1931 as aforeseid, and the abovementioned three industries began to be active again. As to the ratios which appreared for the number of workers, it increased in 1938 to 11.7% for the metal industry, 26.8% for the machine and tool industry and 10% for the chemical industry. Compared with 1919, however, an increase in the ratios of these three industries during the period of 19 years was 139% in the metal industry, 118% in machine and tool industry and 41% in chemical industry, but this increase can by no moss be said to

T. NO. 1762

be vory much compared with the increase experienced furing the period of 10 years from 1909 to 1919.

Thus, even in 1938, the ratio of metal, machine and tool, and chemical industry to the whole industry was 48.5% and taking all these for non-consumer material industry, the remaining 51.5% belong to consumer material industry. Still more, in the chemical industry are included, as aforesaid, the rayon industry (in the 13th year of Showa, number of workers were 87.560) and, besides this, also soop and toilet articles manufacturing industry (in 1938, 9.238) and pulp and paper manufacturing industry (in 1938, 42.597). Accordingly, if these are a cluded the ratio of non-consumer material industry goes down and that of consumer material industry increases all the more.

In short Jepen's industrialization was brought about since the Meiji era by the necessity of her existence and as a characteristic of a belatedly developed industrial country we have seen Japan industrialized principally by textile and other consumer material industries. It appears as if production material industry developed with great speed since 1931, but it was due to industrialization delayed during the period between 1919 and 1991. In other words, this does not mean more than the above delay being speedily adjusted by the influence of a business boom revived after 1931. This trend is considered quite natural for a belatedly developed industrial country that had to follow such a path trudgingly.

- 12-

## 4. Growth in Trade

Industrialized Japan expanded her foreign trade at the same time. The trend of increase is shown in Table 13.

Exports amounted to 222 million yen in 1899, but in 1909 the amount became approximately twice as much as the former, 458 million yen, and in 1919 it increased with a rush to 2 billion 374 million yen. It was five times as much as the amount of ten years prior. But in 1931, it decreased to 1 billion 479 million yen almost a half of the amount in 1919, owing to the depression after the World War 1. Japan's economic circles were beset with difficulties. However, during this period, the exports to Formosa and Korea increased slightly. And thus the decrease of exports to other foreign countries was covered in some measures.

Japanese exports which continued to decrease up to 1931 then began to increase again with the suspension of the gold standard which was effected again in the fall of the same year (in 1917 Japan suspended the gold standard, but she restord it in January, 1930) as well as with the depreciation of the foreign price of yen. Then, the amount of exports increased to 4 billion 88 million yen in 1937 and to 5 billion 163 million yen in 1939.

Next, the imports also showed almost the same change as the exports up to 1937. But during the period between 1937 and 1939, the imports decreased slightly, while the exports increased continuously as mentioned above. Although the imports from Formosa and Korea increased continuously, the imports from other fixelyn countries decreased remarkably.

We have reviewed so far the condition of Japanese trade from the point of view of value of her trade, but this value is influenced by fluctuations in commodity prices. So, after dividing the value of trade, as shown in Table 13, by the price index, in order to exclude these fluctuations in prices, we show the trend of annese trade in Table 14. According to this table, one can conclude that Japanese exports and imports, excepting their decrease since 1937, did not show great variations, and increased smoothly and even rapidly.

Next, by what goods was this increase in trade brought about? Table 15 shows this trend regarding export trade since 1919. In this table, two classified items, the 8th and 9th, which are textile manufactured goods, stand first on the list decidedly all through this period.

The total amount of these two classified items is 1 billion 291 million yen in 1919, 1 billion 598 million yen in 1937, and 1 billion 503 million yen in 1939, and their proportions to the grand total of Japan's export

trade are 61.5%, 50.3% and 42% respectively. But the ratio of exports of textile goods fell gradually, as clearly shown in the figures given above. The export of textile goods in 1939 also decreased in value itself in comparison with that of 1937. These facts show that the export of Japanese textile goods was already slowing down in its rate of increase.

Det. 3000 .7 2

of the Water of the Particular to

Next, the special feature of Japanese exported, as we have previously observed in regard to Japan's industry. If we examine this point in Table 15, cen classified items, namely the 1st (living plants and animals), 2nd(grains, flours, starches and seeds), 3rd (beverages, correstibles and tobacco), 4th (skins, hairs, horns, tusks and manufactures thereof), 8th (yarns, threads, twines, cordagers and materials thereof), 9th (tissues and manufactures thereof), 10th (clothing and accessories thereof), 11th (papers and paper manufactures), 13th (potteries and glass) and 17th (miscellanious articles). all can be said to belong to consumer goods, and these (plus reexports) totalled 1 billion 773 million yen in 1919, 2 billion 499 million yen in 1937, and 2 billion 602 million you in 1939, and their proportions to the grand total of exports were 84.5% 78.7%, and 72.8% respectively. But here also their ratio falls gradually. And, as things to make up for this, other classified item, above all, "ores and metals," scientific instruments, fire arms, vessels, vehicles,

and machineries, " the 16th, began to be manufactured.

Although the total of these three classified items amounted to 139 million yen in 1919, 451 million yen in 1937, and 657 million yen in 1939, and did no increase further, its rate.

of increase was remarkable. However, when we consider the rise in the prices of these goods during this period, we can not say that there was such a remarkable increase in their quantity.

'ave previously observed in regard to Japan's industry. we examine this point in Table 15, and character themas, namely the ist (living plants and onimals), End(grains, flours, starchus and aseda), 3rd 'beverages; " stibles and sebacco), 4th (skins, nairs, horns, tuske and manufactures thereof), Sth (yarns, throads, twines, cords,gars and materials thereof), Oth (tiesuas and semifactures thereof), loth (ciethias and accessories thereof), lith (capers and paper manufactures). lath (potterios and class) and ifth (miscolianious articles), all can we said to belong to consumer goods, and these (plus receppets) to 11:d 1 billion 773 million yen in 1919, mollita 808 mollito 8 ban . ToRi an may notilled 808 mollita 8 yen in 1959, and choir proportions to the grand total of exports seru 84.8" N.V. and 78.8% respectively. Aut here also their ratio falls endenly. And, as things to make bus tore" , lis evods , wit bolliceels made , sind not gu motole," secontific instruments, fire arms, vessels, vehicles,

5. Foreign Pressure on Japanese Goods.

The increase of Japanese exports, especially after 1931, created a problem in the world. At that time, the world was in a general depression, every country suffering from the decline of its export trad. however, as already stated Japan, by suspending the gold standard for the second time in December, 1931, was successful in raising domestic prices, therby stimulating her industrial activities, At the same time, reduction of the international value (exchange rates) of Yen was favourable for the exportation of Japanese goods. As stated above, this was the reason why Japanese exports were increased during the period between 1931 and 1937. This also caused the increase of her import. For Japan, this was the policy absolutely indispensable for her existence. Because, the depression which became worst in 1931 not only struck hard the Japan's industried causing many unemployment but also put her agriculture 'in a extremel difficult condition. Many incidents that happened following the assecination of Primier Inukai in May, 1932 had much connection with this critical state of Japan's domestic condition. Had it not been for the second suspension of the gold standard . ... in 1931 in an attempt to regain her economic prosperity, Japan would have been in a state of extreme disorganization in as early as 1932! nothing assume the contract of the state o

However, the time when Japanese exports were increased

In see done with the factor of the table beyon meants. . .

Day: . I your . Its

The Production of the State of the second state of the second

was when the world was in the midst of a major depression.

It was just then that the British Empire decided to create the socalled British Empire Block by considing the Ottawa Agreement (in July 1932). Meanwhile the World Currency Conference of June 1933 to which much hope was sinned fall through.

Japanese goods, in the course of their panetration into new markets, encountered serious obstacles everywhere in the world.

Principal events are as follows:

(A) Abrogation by British India of the JapaneseIndian Commercial Treaty.

In April, 1933, British India not de Japan of its abrogation of the Japanese-Indian Commorcial Treaty. Its establishment of a discriminately prohibitive tariff upon Japan's cotton goods followed this. Japan opposed this with the resolution of boycotting Indian cotton. In September of the same year, the Japanese-Indian Commercial Conference was convent and an agreement was reached whereby a link system was established between the quantity of Japanese cotton cloth imported into India and Indian cotton imported Japan. In embodying the new provision, a New Japanese-Indian Commercial Treaty was concluded in July, 1934.

(B) Disruption of the Anglo-Japanese Cotton Industry

In accordance with the request by the British Government, an

unofficial Anglo-Japanese Cotton Industry Conference was held between February and March, 1934. The conference however, was finally disrupted because the British side insisted upon having the agreement cover not only the British territories but also foreing markets. In addition to this, in May of the same year, the British Government established throughout the territories of the British Empire' the import-quota system which was extremely disadvantageous to the import of Japanese cotton cloth.

(C) Prohibitive Canadian Dumping Tariff.

In 1935, Canada imposed an almost prohibitive rate of tariff upon Japanese goods. Against this, in July of the same year, invoking the Trade Protection Law, Japan levied a retaliator; tariff on Canadian goods. In August of the same year, Canada tariff supertax. However, a compromise was struck between the took recourse to increasing the rate of her two countries towards the end of the same year, and since January, 1936, Japan has given up the Application of the Trade-Protection Law, while Canada effected either the reduction of the rates or the limitation of the scope of her dumping and other tariffs.

(D) Raising of Tariff Ratos and the Import Licence System by Australia.

In May, 1936, the Australian Government put into effect
the raising of tariff rates and the import licence system,
both of which aimed at Japanese goods. As a counter-measure,
Japan invoked the Trade-Protection Law in June of the same year

Australian extension of the licence-system followed this. However a compromise was reached at the end of the same year whereby Japan gave up the application of the Trade Protection Law, and guaranteed the quantity of wool she imported from Australia and limited quantities of her cotton cloth and artificial silk cloth exported to Australia. Desire to find substitutes for wool stimulated Japan's staple fibre industries.

(E) Restrictions placed upon imports and Importers
by the Netherlands East Indios.

In September, 1933, the Notherlands East Indies put into practice the Emergency import Restrictions haw and the Law Restricting Qualifications of Importers both of which were aimed at Japan. In order to discuss problems of trade with Japan with a view of talking over all along the line, the "Notherlands East Indies proposed in 1934 a conference with her. Japan accepted the proposal and beginning June of the same year, the conference was held at Batavia. While the conference was in progress, however, the Netherlands East Indies extended the scope of the Import. Restrictions, and Japan rotalized by suspending the exportation of certain goods. Thus the conference proceeded at a small's pace. With the conclusion of the Marine Transportation Agreement in June, 1936, however, the conference began to make headway. In March, 1937, compromise was struck, and an agreement was concluded in April, which.

safeguarded the right of Japanese firms to export goods to the Netherlands E.I. (25% of the total amount), guaranteed the import of Java sugar into Japan, alleviated the restrictions Netherland E.I. had placed upon imports, and made 1933 trade results as the basis of the allotment for Japanese goods.

## (F) The United States Trade Policy.

The United States established in 1930 high rates of tariff by the 3MOOT-HAWLEY act which merits special mention in the world economic picture. Under the provisions of this tariff over twenty items of Japanese goods exported to the United States had to suffer an additional ad valorem levy of about twenty three percent.

The United States, as a counter-measure for depression as well as for competition by countries which had gone off gold adopted in 1932 provisions giving flexibility to her customs law, a law preventing international dumping, in an attempt to check the flow of imports. In 1933, the United States suspended the gold standar but took steps to prevent the import of Japanese sundry goods.

Moreover, the Industrial recovery and and the Agriculture Adjustment was of the same your included provisions restricting imports and raising tariff rates. Furthermore, in June, 1934, the sole authority to effect any changes in the tariff rates within the limit of 50 percent was vested in the President, which proved to be a serious menace to Japan. In 1935, increas

Doff. wood flow 1702

oppositions by American cotton merchants, and in December of the same year, Japan enforced the self-restriction of its export in the form of a gentlemen's agreement. However, being dissatisfied with this, American merchants demanded having the quantity of exports limited by the application of the provisions of the A.A.A. Thereupon the American Government, in June, 1936, put into effect an all-round increase in the tariff rates on an average of 42 percent.

In 1937, a mission representing the American cotton industry came to Japan, asking for the conclusion of the Cotton Industry Agreement. Japan complied with this and, in June of the same year, put into effect the restrictions upon the quantity of her cotton cloth exported to the United States. However, in view of the fact that goods imported from the United States were either indispensable or raw materials, Japan was unable to take any retaliatory or defensive measure against it.

(G) Trade Policy of Central and South America

Having been driven away from British Dominions including

India and been shut out of the Motherlands East Indies, Japanese
export goods found their way into Contral and South American

markets, where intense competition for the market took place
between Japanese goods and goods from other countries. In an

meanus , such as a market

Mari . co . co . Total

united States concluded Reciprocal Trade Agreement with these countries. "eanwhile Japan endeavoured to establish Compensating Trade System with these countries; the Central and South America countries themselves consolitated their commercial policies.

It is only natural that the above-mentioned policies of the foreign countries against the Japanese goods virtually prevented the extension of the Japanese oversea trade. As has been shown, the Japanese exports and imports obviously decreased after 1937.

Table No. 16 shows the state of decrease by respective districts. The table shows that compared with the exports in 1937, those in 1939 suffered decrease in every district save in asia where an increase is indicated. As for imports, there was a decrease also in Asia, but the decrease was no more than one hundred and fourteen million yen. Pince total decrease in imports was eight hundred and sixty-six million yen, the decrease of exports for all areas except Aisa amounted to seven hundred and fifty two million yen.

ports in Asiatic markets reveals that the increase was due entirely to that in Manchuria, Lantung Province and China. As for the exports to other districts, except for slight increases to Iran and Iraq, a general decrease is indicated. That is to say, according to table No. 17 showing comparison of exports to Asiatic

T. Dogs . 121.

districts between 1937 and 1939, the exports in 1939 to all Asiatic districts, except Manchuria, Awantung Province and China, show a decrease of two hundreds and eighty one million yen in comparison, with those in 1937. In other words, the decrease is equivalent to 32.9 parcen, of total exports to these districts in 1937, which amounted to sight hundred and fifty four million yen. Furthermore, according to table No. 16, exports in 1939 for all continents except asia show a decrease of two hundreds and tanegre ond seventy three million yen compared with those in 1937. Consequent. there was a decrease totaling five hundred and fifty four million yen in Japan exports in 1939 for all sections of the world excepting Manchuria, Kwantung Province and Juina, compared with those in 1937. To show, this by percentage, Japan lost in 1939 23.2 percent of her exports to those districts in 1937 which had amounted to itwenty three hundred and eighty four million yen. To see these figures is to understand how heavy a blow was dealt to Japanese financial circles.

It goes without saying that Japan could not stand such a plight for a long time. However, enourmously Japan might have increased her exports to Manchuria, hwantung Province and China, there was no likelihood that she could import in return raw materials, food stuffs otc. from these districts which were in-

abri. F. t. tree

was no way but to decrease her exports for these three districts.

Thus, under the Circumstances Japan not only could not have endured
the strain of the China Incident for long, but also even the
peaceful livelihood of her nationals have been endangered.

It was Indeed unavelable that Japah, who had been pressed into such a distressing some, should have taken measures to repel such serious financial and political insecurity. It was just as President Truman stated in one of his recent speeches, attached hereto. Because of the uneasiness that Japanese goods, especially textile fabrics, might be shut out from the world market, Japanese goods, especially textile fabrics, might be shut out from the world market, the tendency o reorganize Japanese industries from the manufacture of goods for consumption into other fields was accelerated. The export difficulty made the import difficulty inevitable, thereby strengthening the idea of national self-sufficiency. The advocacy of the creation of the Japanese-Manchurian or Japanese-Chinese economic block resulted from this. Finally, such state of affairs made the Japanese conceive the idea of the establishment of the Greater East Asia Co-prosperity Sphere.

However, the establishment of the Greater East Asia Coprosperity Sphere was no more to an idea, (indeed, no Japanese had any diffinite idea about the Greater East Asia Co-prosperity Sphere untill the last) and even the development of Manchuria and China was impossible of accomplishment in a short time. Certainly,

japan had exerted considerable efforts for these undertakings, resulting, however, in her excessive investments in and export to Manchuria and China. As has been pointed out, Japan could not expect an immediate and extensive increase in imports of her necessary commodities from these districts.

After the conclusion of the Tripartite Alliance, the situation rapidly grew worse, and in 1941, when the United States froze. Japan's assets, she was in such a predicament that there was no way to save the situation. It meant that Japan had lost the market for her raw-silk, which was one of her most important products. It meant also that Japan had lost the source of materials for her cotton industry, which was also one of her most important industries. Above wall, the fact that the United States resolutely carried out the freezing of Japanese assets had immediate effect on Britain and the Netherlands East Indies, both of which froze Japanose assets. Following their examples, Canada, Australia. New Zealand, Malay, Burma, India, the Union of South ifrica, etc. all froze apanese assets and abrogated respective commercial treaties with Japan. Thus Japan had suffered an almost complete economic blockade, and Japan's industries as well as her very existence were threatened. This was the actual state " " ....... of things at that time. However, Connese industrialists still acre believed in a favourable turn in the relations between Japan and the United States. n is a final of itituu

was impossible of an army and and army deviceding,

in the state of th

On this 29 day of July, 1947

At YAMANASHI

This is not, and it mint hever be, the policy of a single ministration.

I, Migita Masdo horoby certify that the above statusent of was sworn by the Deponent, who affixed his signature and seal thereto in the presence of this witness.

This attitude one of the foreign of the assertion that there should be being at the united States, bu that there being no the United States, bu that there need not be being as a support for the foreign policy of the United States, but the third of the being as a support for the support of the being as a support of the being as a

Such a statement simply does not make selme.

In accordance with my conscionce I swear to tell the whole truth withholding nothing and adding nothing.

ISHIB SHI, Tanzan (seal)

The members of the United Matters have remounded aggression as a method of mething their political differences. Instead of putting armies on the merch they have now agreed to alt down around a table and talk things out.

In any dispute each worth will present its case. The interests of all will be considered and a fatr and just solution will be found. Thisis the day of a dividized corruntty. It applies.

President Truman's Address at Baylor on Foreign Economic Policy

Policy of All the People

This is not, and it must never be, the policy of a single administration; or a single party. It is the policy of all the people of the United States.

We in America are unanimous in our determination to prevent another war.

But some among us do not fully realize what we must do to carry out this policy. There still are those who seem to believe that we can confine our cooperation with other countries to political relationships; that we need not cooperate where accommic questions are involved.

This attitude has sometimes led to the assertion that there should be bipartisan support for the foreign policy of the United States, bu that there need not be bipartisan support for the foreign economic policy of the United States.

Such a statement simply does not make sense.

Our foreign relations, political and economic, are indivisible. We cannot - say that we are will to cooperate in the one field and are unwilling to cooperate in the other. I am glad to note that the leaders in both parties have recognised that fast.

The members of the United Nations have renounced aggression as a method of settling their political differences. Instead of putting armies on the march they have now agreed to sit down around a table and talk things out.

In any dispute each party will present its case. The interests of all will be considered and a fair and just solution will be found. This is the way of international order. It is the way of a civilized community. It applies.

with equal logic, to the settlement of economic differences.

But it is always serious. One nation may take action in behalf of its own producers, without notifying other nations, or consulting them, or even considering how they may be affected. It may cut down its purchases of another country's goods, by raising its tariffs or imposing an embargo or a system of quotas on imports. And when it does this some producer in the other country will find the door to his market suddenly slarmed and bolted in his face.

Or a nation may subsidize its exports, selling its goods abroad below their cost. When this is done a producer in some other country will find his market flooded with the goods that have been durpted.

In either case the producer gets angry, just as you or I would get angry if such a thing were done to us. Profits disappear; workers are dismissed.

The producer feels that he has been wronged, without warning and without reason. He appeals to his Government for action. His Government retaliates, and another round of tariff boosts, embargoes, quotas and subsidies is under way. This is economic war. In such a war nobody takins.

Certainly nobody won the last economic war. As each battle of the economic war of the Thirties was fought the inevitable tragic result became more and more apparent. From the tariff policy of Hawley and Smoot the world went on to Ottawa and the system of imperial preferences, from Ottawa

Def. Doc. MyEs

to the kind of elaborate and detailed restrictions adopted by Nazy Germany.

Nations strangled normal trade and discriminated against their maighbors all around the world.

Who among their peoples were the gainers? Not the depositors who lost their savings in the failure of the banks. Not the farmers who lost their farms. Not the millions who walked the streets looking for work. I do not mean to say that economic conflict was the sole cause of the depression.

But I do say that it was major cause.

Now, as in the year 1920, we have reached turning point in history.

National economies have been disrupted by the war. The future is uncertain everywhere. Economic policies are in a state of flux. In this strosphere of doubt and hesitation the decisive factor will be the type of leadership that the United States gives the world.

We are the giant of the economic world. Whether we like it or not the future pattern of economic relations depends upon us. The world is waiting and watching to see what we shall do. The choice is ours. We can lead the nations to economic peace or we can plungs them into economic war.

mit to eleted done a. (The New York Times, Friday, March 7, 1947.)

Destrainly noted on the County on Tought the insvitable trenit became

three and have appearant . It is tentify policy of Harloy and South the extent
